

Auszug aus der Java Grammatik

```

<expression> ::= <ident>
                | <const>
                | <expression> <infix_op> <expression>
                | ( <expression> )
                | <expression> . <ident>
                | <expression> . <ident> ( )
                | <expression> . <ident> ( { <expression> , } * <expression> )
...
<statement> ::= <type_expression> <ident> [= <expression> ];
                | <ident> = <expression> ;
                | { { <statement> } + }
                | if ( <expression> ) <statement> [ else <statement> ]
                | <expression> ;
...
```
